Project Title: Evaluation of Vision-Based Hand Tracking During Piano Interaction

Researcher: Aayam Regmi

Supervisor: Mr. Saroj Sharma

Institution: The British College

Purpose of the Study

This study aims to evaluate the accuracy and robustness of computer vision hand-tracking models during simple piano key interactions.

What Participation Involves

- You will be asked to play simple predefined piano key patterns.
- Your hand movements will be recorded using a webcam positioned above the keyboard.
- MIDI timing data from the digital piano will also be recorded.
- The session will last approximately 10–15 minutes.

Privacy and Confidentiality

- Only the hand region will be recorded; no facial images or identifying features will be captured.
- You will be assigned an anonymous participant ID (e.g., P01).
- No names or personal identifying information will be stored with the data.
- Data will be stored securely and used only for academic research purposes.

Voluntary Participation

- Your participation is completely voluntary.
- You may withdraw at any time before data anonymization without penalty.

Risks and Benefits

- The activity involves simple piano key presses and poses no risk beyond normal daily activity.

- The research may contribute to improvements in hand-tracking and human-computer interaction systems.

Consent Statement

I confirm that:

- I have read and understood the information above.
- I understand that my participation is voluntary.
- I agree with the recording of anonymized hand video and MIDI data for academic research purposes.
- I understand that anonymized results may be used in a dissertation or academic publication.
